## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Shiue et al (USPN 5,846,269). Shiue et al discloses a metal-bonded grinding tool comprising a base, abrasive grains bonded to the base by means of a metal bond matrix containing a Cu alloy as a main component, wherein the metal bond matrix contains at least one of an alloy phase, a mixed phase and an intermetallic compound of Zr and Ti, wherein a content of the at least one of an alloy phase, a mixed phase, and an intermetallic compound of Zr and Ti in the metal bond matrix is in a range of 15 to 25 wt%, wherein the Cu alloy consisting of a bronze containing 23 wt% of Sn, wherein the abrasive grains are abrasive grains of diamond or cubic boron nitrate (note col. 3, line 3 to col. 4, line 9).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3723

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shiue et al (USPN 5,846,269). Shiue et al discloses the claimed invention as describe above, however, Shiue et al does not disclose that an intermetallic compound of Zr and Ti in the metal bond matrix is in a range of 6.4 to 14.1 wt%. It would have been obvious to one having ordinary skill in the art at the time the invention was made to select a range 6.4 to 14.1 wt%, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable range involved only routine skill in the art. *In re Aller*, 105 USPQ 233.

#### ***Response to Arguments***
